EFT™ Migration And Sync Tools

Import, Export, Synchronize, And Automate

EFT has had a COM-based administrative API used to perform integration with other automated systems within an enterprise since its inception. Over time, our customers have requested various tools for the export, import, and manipulation of administrative data. These have matured to the point that we are offering them in a packaged product, the EFT Migration and Sync Tool.

Use The Tools In Many Different Ways:

- Promote granular changes between development, testing, QA, and staging to production environments
- Foster best practices for development and minimize risk and human error when promoting changes between environments
- Synchronize settings within EFT Server for Active/Active configurations
- Automatically disable Event Rules with a single command
- Automate the deployment process
- Export, ship and import configurations to Disaster Recovery environments
- Easily find and replace host names and credentials on all Event Rules
- Migrate settings based on your business process by customer (account, permissions and event rules)
- Split or consolidate EFTs easily

Three Tools With Overlapping Capabilities:

- **User Import/Export Tool:** a simple GUI-driven tool for creating user accounts in bulk. Used frequently for new server implementations.
- **Total Configuration Import/Export Tool:** a command line tool capable of exporting existing EFT configurations to an XML format which can be transformed and imported into the same or a different EFT.
- **Total Configuration Sync Tool:** a complex tool meant to provide continuous mirroring of configuration among EFTs. An intermediate database is used to house the configurations pulled from each EFT before pushing to the other EFTs.

KEY RESULTS

XML Import And Export Of:

- Site settings
- DMZ Gateway® settings
- SSH key ring keys

- OpenPGP key ring keys
- User IP access list
- Advanced Workflows
- Custom Commands

- User Settings Template settings, Groups, and Permissions/Virtual Folders
